

Automotive Market & Competitor Analysis

Germany | Compact segment | January-December 2025 | Arwa Menaouar

Business question

How did Audi A3 registrations compare with BMW 1 Series and Mercedes A-Class during 2025?

Finding 1: Audi leads this peer group

Audi A3: 34,046

BMW 1 Series: 26,293

Mercedes A-Class: 18,480

Audi A3 accounts for 43.20% of the three-model total. Its share of the **whole compact segment** is 7.15%. These use different denominators.

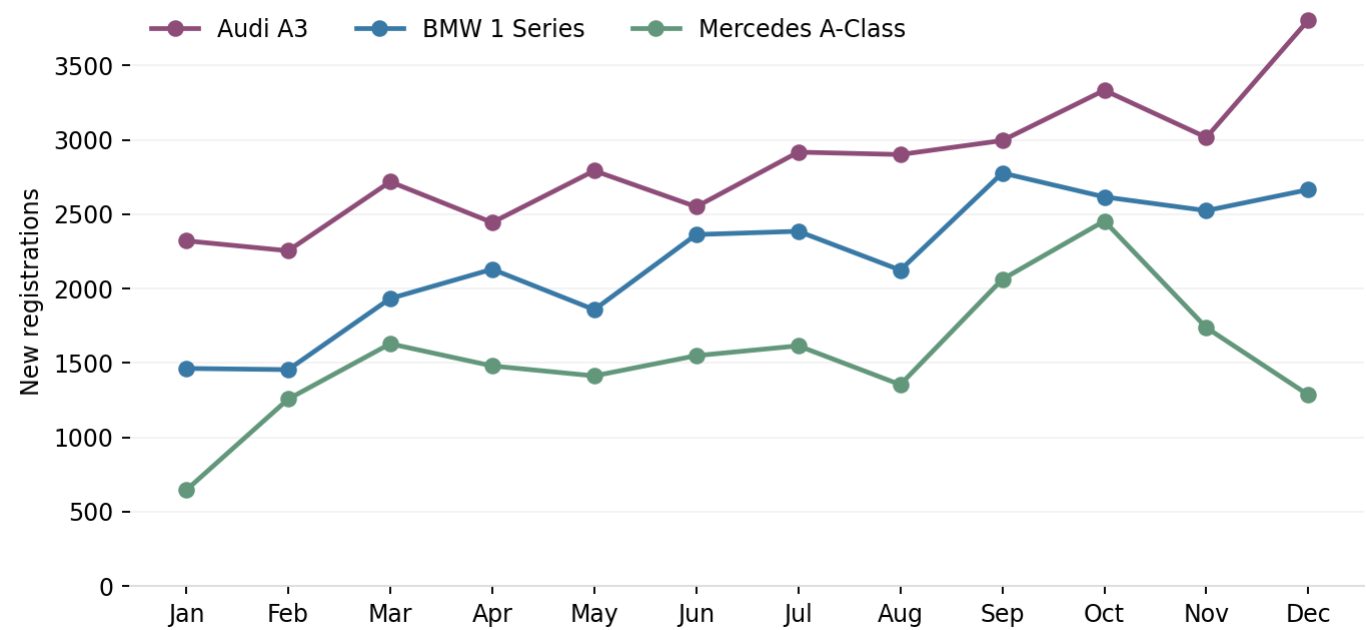

Interpretation

Audi leads the selected comparison. This does not establish leadership across the whole segment or explain customer preferences.

Scope: 36 records (three model families x 12 months). The full 2025 dataset contains 4,917 records; its compact-segment total is 476,480 registrations. Model families can differ in price, trim and powertrain mix.

Monthly Trends & Half-Year Comparison

Germany | Compact segment | January-December 2025 | Arwa Menaouar

Model	January-June	July-December	H2 versus H1
Audi A3	15,079	18,967	+25.78%
BMW 1 Series	11,202	15,091	+34.72%
Mercedes A-Class	7,973	10,507	+31.78%

Finding 2: all three models had higher registrations in the second half. BMW had the largest percentage increase (+34.72%); Audi remained ahead in annual volume.

Finding 3: peak months differed: Audi - December (3,805); BMW - September (2,777); Mercedes - October (2,454). A single year does not establish recurring seasonality.

Recommendations & Analytical Limits

Germany | Compact segment | January-December 2025 | Arwa Menaouar

Observed finding	Recommended next step
Audi leads the selected peer group.	Track both peer-group share and full segment share. Include other compact models before making wider market claims.
Competitors had stronger H2 percentage growth.	Review model availability, product changes and registrations by fleet/private holders to investigate possible drivers.
Peak registration months differ.	Review several years plus orders, deliveries and stock records before using these peaks to guide production or campaigns.

What the data can tell us

Observed registration volumes, model rankings, monthly trends and shares within the reported compact segment.

What it cannot tell us

Actual sales revenue, profit, order demand, lost sales, customer motivations or the causes of changes. Half-year growth is not year-over-year growth. Results depend on the supplied portal snapshot and KBA reporting definitions.

Method

Filter the portal export to 2025; retain model-level registration counts and identifiers; validate all 12 months and unique model/segment/month records; aggregate using SQLite SQL. Tableau-ready exports support the charts shown here.
